

Programming in ML

- ML is a general-purpose programming language, reflecting the core research achievements in the field of programming languages.
 - higher-order functions
 - static typing and automatic type inference
 - parametric polymorphism
 - algebraic data types and pattern matching
 - automatic garbage collection
- ML inspired the design of modern programming languages.
 - C#, F#, Scala, Java, JavaScript, Haskell, Rust, etc
- We use OCaml, a French dialect of ML:
